SIG-Lecture

Context project: Crisis management

June 5, 2014

introduction blablabla

Algemeen

Model

They put every method in a catogorie (4 in total) on risk category. That creates a pie chart, and that is compared to other big programs and gives a star rating of 1 till 5

Search and Resque

Volume and Duplication

Use library's when possible.

- Volume makes all issues smaller

Component balance and component independence   soort van uml diagram

Unit size and unit complexity

verbeteringen

- README: zorg dat hier duidelijk staat hoe het project in elkaar zit. -¿ component understanding

- uml should be clear, dependencies are not always needed. Discus them, make changes.

- Zorg dat alle if for while dingen zoveel mogelijk gesplits wordt.

- care for to many implementations in the abstract

- keep your code base clean. Throw away old or decrepated stuff.

- keep code and library apart

- use meaningful names (dont always follow the checkstyle)

- Dont ignore exceptions(don't leave it as todo)

- Describe stuf that isnt logig -¿ try/catch

- make sure to create tests 1:1 on prodution code. This ratio should be better next time.
